

Covid 19 perspective of head and neck surgeon

Sudhakar V.S .Goparaju

TMC, Mumbai, India

Abstract

Head and neck surgeon imparts a key role in the multidisciplinary management of Covid 19 patients. Over the past 2 years, corona virus has undergone many genomic mutations with varied symptoms involving upper/ lower respiratory tract, vascular and immune systems having effected mainly.

Amidst the first and second pandemic waves of spread its management has become challenging. Irrespective of countries, the global communicable spread, symptomatic and preventive management remains the main strategy so far. Recent origin of Omicron virus poses further challenges till the eradication of the pandemic.

This presentation is attempt to contribute services to the Covid 19 patients, throwing focus on the possible best care that can be given from the perspective of head and neck surgeon.
